Complete this after each clinical day. Identify who the recipient of care was. It may be more than one. Indicate age, gender, ethnicity. Identify the location of the interaction. Did you provide direct care or were you only observing. You may have done both. What were the patients' diagnoses? If you cared for a group of patients, put them on one row. Give the age span, put variety if they were of several ethnic backgrounds, and list the diagnosis for all the patients. Use nursing or medical diagnosis. Turn the form in on the last day of clinical.
