

Summary

This tutorial was created to assist others in gaining a basic understanding of the shape tween function in Adobe Flash.

Project Details

I started by finding tutorials on basic aspects of Flash, I completed them and then chose from among them which one I would like to do my tutorial on. I then walked through the steps while compiling them into a Word document. From those steps I wrote a script for both my audio and video capture. Using my script I first recorded my voice-overs with Audacity and then edited it to my liking. I then played back my audio while using Camtasia's video screen capture to create my video. After the video was complete I added the audio to it using Camtasia's video editor, syncing them as much as possible. I then exported it and posted it to YouTube.

Project Output

All project materials are located on the Mozart computer in the DMC lab on the D: drive under "bentomc."
