#### Pacific Lutheran University School of Nursing

#### Mission

Pacific Lutheran University seeks to educate students for lives of thoughtful inquiry, service, leadership and care—for other people, for their communities, and for the earth.

Pacific Lutheran University School of Nursing is dedicated to...

- Exemplary and responsive undergraduate, graduate, and continuing nursing education;
- Engaging clinical and community partners in compassionate care for individuals, families, communities, and the world;
- Fostering leadership in nursing through committed service, highest quality education, and meaningful scholarship;
- Advancing the vision and mission of the university through collaborative partnerships that foster innovation and change.

#### **Graduate Program Outcomes**

The DNP curriculum is based on the AACN *Essentials of Doctoral Education for Advanced Nursing Practice* (2006) and prepares nurses to practice at the highest level of advanced nursing practice, as well as provide leadership for practice change to improve patient outcomes. Students will demonstrate outcome achievement through their clinical evaluations, projects and coursework. Evidence of achievement is found in their DNP portfolio.

#### **Doctor of Nursing Practice FNP curriculum**

The PLU Doctor of Nursing Practice (DNP) degree prepares graduates in the advanced practice specialty area of Family Nurse Practitioner (FNP) or Psychiatric Mental Health Nurse Practitioner (PMHNP). Graduates are able to develop and evaluate quality within a health system, collaborate with inter-professional teams to improve health outcomes, and be leaders in the nursing profession in addition to practicing independently in their repective nurse practitioner specialty. The DNP curriculum consists of core coursework (theory, advanced practice roles, evaluation and outcomes research, leadership and management, and advanced health promotion, information systems and patient care technology, epidemiology, analytical methods, translating research into practice, and health policy), a DNP Scholarly Project and Nurse Practitioner specialty coursework. The Family Nurse Practitioner core coursework focuses on client-centered clinical practice, and prepares nurses to respond to the needs of today's and tomorrow's health care consumers, to manage direct care based on advanced assessment and diagnostic reasoning, to incorporate health promotion and disease prevention interventions into health care delivery, and to recognize their potential for professional growth, responsibility, and autonomy.

The FNP curriculum is based on the National Organization of Nurse Practitioner Faculties (NONPF) 2017 Nurse Practitioner Role Competencies (Appendix A) and the NONPF Family Nurse Practitioner Primary Care specialty competencies (Appendix B).

Successful completion of the DNP Family Nurse Practitioner program qualifies students to sit for national certification examinations for Family Nurse Practitioner, making them eligible under Washington State law for Advanced Registered Nurse Practitioner (ARNP) licensure.

The PLU DNP FNP program requires 36 months of full time study and includes 1080 hours of clinical, with 630 hours specific to the FNP specialty role. The PLU DNP program includes clinical experience specific to quality and outcomes at the systems level before they begin the FNP core courses, and 300 hours of clinical practicum designing, implementing and evaluating a scholarly project. Scholarly projects will focus on applying evidence based research into practice, and may be completed in the primary care setting or within a health system to improve patient outcomes.

Molly Martin DNP, RN, ARNP, FNP-BC Clinical Instructor martinmj@plu.edu

Jonathan Raffesberger DNP, RN, ARNP, NP-C Clinical Instructor jonathan.raffesberger@gmail.com

Jessica Schwinck DNP, RN, ARNP, AGACNP-BC, FNP-BC Assistant Professor schwinjl@plu.edu

#### **Faculty Guidelines**

#### Role and responsibilities of FNP faculty

The PLU faculty member teaching a FNP clinical course (course lead) assumes all responsibility for the didactic and clinical components of the course. Responsibilities of the FNP course lead faculty include:

- Orientation and training of clinical faculty
- Oversight of clinical faculty
- Ensure all documents completed and submitted
- Ensure course, clinical, preceptor and clinical site evaluations completed and submitted at the end of the course
- Complete a course evaluation to inform future offerings
- Report any student performance concerns to the program director
- Assign students to specific preceptors
- Orient preceptors to the course
- Perform clinical site visits
- Maintain open lines of communication with preceptors and clinical sites, and supervising student learning

#### Clinical placement coordinator

The clinical placement coordinator maintains contracts, Clinical site/preceptor database and coordinates, clinical placements and student onboarding. The lead course faculty will work with the clinical placement coordinator to identify/secure clinical site placements and preceptors for students and verifying clinical contract is current,.

#### Clinical sites and preceptors

PLU SoN seeks clinical site placements and preceptors to ensure the best possible experiences for the FNP student. Each preceptor and clinical site enters into a contractual agreement with the PLU School of Nursing for the student's clinical rotations. All students are covered by the PLU School of Nursing liability insurance through American Casuality Company of Reading, Pennsylvania. It is the responsibility of the clinical placement coordinator and PLU faculty teaching a clinical course to ensure the clinical contract is in place before students begin clinical hours for the semester.

#### Assigning students to preceptors

Students are assigned to a preceptor by the FNP program director, in consultation with FNP faculty, to provide clinical rotations focusing on course outcomes and individual student learning needs. Occasionally students will request a specific site or preceptor. Typically, students are not placed with preceptors that have previous relationships with the student. It is the responsibility of the faculty to discuss with the student their educational needs and how the site will meet the objectives of the course before determining if the site is appropriate for the student. Students should not be arranging clinical placements directly with the preceptor and any student doing so should be directed to the lead faculty for the course.

#### Orienting preceptors

Preceptors are oriented individually via conversations with FNP Course lead and clinical faculty, ongoing email, face-to-face meetings, and the PLU FNP Preceptor Manual. Communication occurs throughout each semester as needed. Preceptors are mailed a copy of the preceptor handbook, course syllabus, evaluation forms, clinical agreement letter, and an overview of the PLU FNP curriculum each semester.

#### Supervision of clinical learning

FNP clinical faculty formally visit each student in their clinical site a minimum of once a semester to observe clinical progress. If needed, the faculty will visit the student multiple times during the semester to assist the preceptor and monitor the student clinical performance. All FNP faculty are responsible to review the electronic/paper Student Tracking System logs to assess assigned student progress toward attainment of clinical objectives for the course and to determine if students are getting the clinical experiences to meet the NONPF FNP competencies. Course lead faculty are responsible to ensure training and oversight of clinical faculty.

#### **Preceptor Guidelines**

The PLU School of Nursing recognizes the critical role preceptors play in the education of our FNP students. Preceptors provide advanced knowledge and skills that assist our FNP students to develop into advanced practice nurses.

#### Role and responsibilities of the preceptor

The primary role of the preceptor is one of clinical instructor, coach, supervisor and evaluator. Nurse practitioner preceptors also act as role models and socialize the student to the nurse practitioner role (Ulrich, 2011). Preceptors assist the student in incorporating knowledge learned in the classroom into the clinical management of patients. The preceptor provides instruction as the student observes and then gradually becomes responsible for assessment, diagnosis, treatment, health care evaluation and monitoring, health promotion and counseling that form the basis of FNP practice.

#### Specific preceptor role responsibilities

- Negotiate dates and times for student clinical experiences and notifies the student if they are unable to be
  present. If preceptor is unable to be present for an arranged clinical day they may arrange for a qualified
  substitute or reschedule with the student.
- Provide orientation to the clinical site and health record the student's first week.
- Orients student to policies, operational procedures and protocols specific to the clinical site.
- Reviews course objectives and student goals for clinical experience and negotiates with the student how they will meet the objectives.
- Be available to the student at all times the student is seeing patients.
- Selects, with the student, patients appropriate to meet clinical objectives for the day and semester.
- Intervenes where appropriate to manage situations beyond the student's ability.
- Evaluates student's care while providing immediate feedback and cosigning all charts.
- Evaluates the student verbally and in writing.
- Contact faculty if there are problems with student.

#### Qualities that make Super Preceptors (Barker & Pittman, n.d.)

#### **Professional Characteristics**

- Willing to work with a student who is a neophyte as well as more advanced students
- Supportive of the student's educational program
- Current knowledge and skills
- Models appropriate behaviors and attitudes
- Willing to give constructive feedback
- Supports student growth

#### Personality characteristics

- Empathetic
- Warm
- Respectful
- Sense of humor
- Flexible
- Fair
- Dependable
- Consistent

#### **Preceptor selection criteria**

All preceptors are considered to be experts in their area of practice, with a minimum of one year of clinical practice experience. Preceptors may be nurse practitioner, physician assistants, or physicians with clinical practice expertise, teaching skills and the willingness to be a preceptor to an FNP student. Preceptors must be currently licensed to practice and certified in their practice specialty. PLU maintains a record of preceptor curriculum vitae (CV), including professional practice experience for accreditation purposes; therefore we ask that all preceptors submit their current CV.

#### Strategies for working with students

Precepting students is a skill as well as a relationship. This section of the manual provides strategies for working with nurse practitioner students. Resources are provided in the reference list for more in-depth preceptor education, including a link to the American Association of Nurse Practitioners *Preceptor Toolkit* from which many of these strategies are taken.

#### Orientation strategies

To establish a quality preceptor-student relationship it is recommended that the student has a formal orientation to the practice and their preceptor's practice style.

- Set aside time for orientation at an hour that works to cause the least disruption to the practice flow. Length of orientation will vary by the setting, but usually an hour or less.
- Introduce the student to clinic staff and key personnel.
- Discuss "ground rules" including patient selection, protocols or policies specific to setting
- Explain your process for precepting including how you will introduce the student to patients and how you will be checking their physical examination findings
- Get to know the student
- Have them shadow you for the first half day in clinic together so they understand the flow of visits

#### Assisting students to learn in the clinical setting

- Create an environment that is conducive to learning
  - o Students are often anxious in the beginning of each clinical experience
  - o Seek appropriate patients for the student's level of experience
  - o Give constructive positive feedback
- Demonstrate new skills or bring students in on complicated patients you see to provide an example of how you approach the patient
- "Think aloud" as you reason through a complex patient you are seeing to role model clinical decision making
- Assign readings or resources you have found helpful
- Use charting to teach.

- Direct students to think about their patient encounters
  - o Ask them what they think is going on with the patient
  - Ask for supporting evidence. What in the history or exam lead to the conclusion?
  - o Assist them in broadening their differential
- Reinforce what they do right. "You did an excellent job of..."
- Correct mistakes. "Next time this happens, try...."
- Try the "Five-step Microskills Model of Clinical Teaching" to direct the discussion and use your time efficiently (see Appendix C)

Suggestions for managing patient flow while precepting

- Look at schedule ahead of time and plan which patients the student may see
- Allow time for the student to think
  - o Have the student see a patient while preceptor sees another patient
  - Student presents history and physical to preceptor
  - Preceptor sees patient to confirm findings
  - o While preceptor seeing patient, student develops plan
  - o Students presents plan to preceptor
  - o Student and preceptor returns to room to communicate plan to patient
  - o Student charts encounter while preceptor sees next patient
  - o When charting complete, student sees another patient
- Students may only see 4 patients a day in the beginning of a semester and build up to 10 a day at the end of their program depending on the complexity of the patient.
- Barker and Pittman recommend occasionally scheduling "focused half days" where there is a specific focus to the learning, diabetes or COPD for example. The student spends time before and after the visit reading the chart of 2 or 3 patients and reviewing guidelines for management and only sees the patients with diabetes or COPD that half day. The preceptor sees the rest of the patients and then can focus their teaching time on diabetic or COPD management. The focus can be either tied to what the student is learning that week in class or an area they find challenging.

#### **Online Precepting Resources**

The National Organization of Nurse Practitioner Faculties offers online brief video vignettes that may be useful to preceptors (<a href="http://www.nonpf.org/?page=Preceptor\_Vignettes">http://www.nonpf.org/?page=Preceptor\_Vignettes</a>) or go to the <a href="https://www.nonpf.org/?page=Preceptor\_Vignettes">nonpf.org</a> site and the Education tab to find preceptor info.

Vignette topics include "Precepting in a Busy Clinic" "Precepting the Primary Care NP Student" "Precepting the Overly Confident NP Student" "Precepting the Overly Sensitive NP Student"

#### **Documentation of visit**

Students may document in the patient chart their history, physical, assessment and plan for the patient. Preceptors need to document in the patient's note that they were present for or conducted themselves (rechecked the student's findings) the key portions of the history and physical, as well has helped the student develop the plan of care. This will ensure you comply with Medicare/Medicaid billing rules.

#### **Evaluation of student**

Honest student evaluations are critical for the student, faculty and the patients the student will be caring for. Evaluation can be formal or informal. Formal written evaluations should be done at mid-term and the end of the semester. Evaluation forms are provided to preceptors and are found in the Appendix. Informal evaluation occurs throughout the semester and is part of a supportive learning environment.

#### Constructive evaluation is:

- Honest
- Timely
- Based on skill development. Don't expect a student to know they have a skill deficit if you don't tell them about it. Tell them, teach them and let them learn.
- Based on student's level. Remember where they are in their program before evaluating them.
- Specific rather than general
- Positive as well as negative

#### Dealing with difficult students

While each student who enters the graduate program is highly qualified academically, the role transition to advanced practice nurse may be challenging for some. Identify any professional or boundary issues early and communicate them to the student with expectations for change. Failing students often lack insight, therefore they need direct communication regarding their progress. Seek the assistance of the faculty as appropriate.

#### If you have concerns about a student:

- Communicate early with the faculty and the student
- Document any concerns you may have in the formal evaluation
- Trust your judgment

#### Filling out PLU clinical evaluation forms

Honest preceptor feedback is critical to the student, the faculty, and to the role of the ARNP. The clinical evaluation tool is designed to give feedback to the student at midterm and at the end of the semester. Students are expected to progress in skill and knowledge development throughout the program, so lower marks are expected at midterm than at the end of the semester.

When filling out the clinical evaluation tool, note the course level where the faculty expect the student to be at the end of the semester. If you have concerns about student progress at any time during contact the clinical faculty via email as soon as possible. (Appendix D-H)

#### **FNP Student Guidelines**

#### Role and responsibility of the student

#### Clinical Placements

PLU faculty seek clinical site placements and preceptors to ensure the best possible learning experiences for the FNP student. Students are assigned to a preceptor by the FNP program director in consultation with FNP faculty to provide clinical rotations focusing on course outcomes and individual student learning needs. lead FNP faculty member. Occasionally students may request a specific site or preceptor. It is the responsibility of the faculty member to discuss with the student their educational needs and how the site will meet the objectives of the course before determining if the site is appropriate for the student. Students should not be arranging clinical placements directly with the preceptor.

#### *Pre-clinical preparation*

All students are required to complete the requirements for being in the clinical site including immunizations, CPR, proof of Washington RN license, criminal background check, and any additional clinical site requirements. Students should be able to present their clinical passport to the agency to provide proof of being cleared for clinical.

#### Clinical attire

Students are to wear their PLU student photo ID at all times while in the clinical site. Some agencies require additional agency identification and students should follow all agency identification requirements. Students should wear their white lab jacket while seeing patients, unless directed otherwise by the clinical preceptor or agency. Students must exercise good personal hygiene and present themselves in clean, well-fitting, clothing that is professional in appearance.

#### Preparation for clinical learning

Students are expected to come to the clinical site prepared to learn. At the beginning of the semester students should review the clinical course objectives as well as the evaluation form for the specific clinical course the preceptor and faculty will be using for evaluation. Students should review with preceptors any additional individual learning objectives they may have, providing an opportunity to discuss expectations and responsibilities of each.

Because each preceptorship experience is unique, the student should be prepared to research disease processes and treatments that present themselves during the clinical day. Students should be prepared to access clinical resources such as text books or on-line evidence based databases in order to provide excellent patient care.

#### Recording clinical experiences

FNP students document their clinical experiences and hours in the Typhon® NPST Student Tracking System. Typhon® enables tracking of clinical hours, the age and diagnosis for each patient to ensure the FNP student has seen patients across the lifespan and having a range of preventive health, acute and chronic illness visits and procedures. The student will present a copy of their clinical hours log to the preceptor for their signature at the end of the semester for approval.

#### APPENDIX A

#### National Association of Nurse Practitioner Faculties Nurse Practitioner Core Competencies (2017)

#### **Scientific Foundation Competencies**

- 1. Critically analyzes data and evidence for improving advanced nursing practice.
- 2. Integrates knowledge from the humanities and sciences within the context of nursing science.
- 3. Translates research and other forms of knowledge to improve practice processes and outcomes.
- 4. Develops new practice approaches based on the integration of research, theory, and practice Knowledge

#### **Leadership Competencies**

- 1. Assumes complex and advanced leadership roles to initiate and guide change.
- 2. Provides leadership to foster collaboration with multiple stakeholders (e.g. patients, community, integrated health care teams, and policy makers) to improve health care.
- 3. Demonstrates leadership that uses critical and reflective thinking.
- 4. Advocates for improved access, quality and cost effective health care.
- 5. Advances practice through the development and implementation of innovations incorporating principles of change.
- 6. Communicates practice knowledge effectively both orally and in writing.
- 7. Participates in professional organizations and activities that influence advanced practice nursing and/or health outcomes of a population focus.

#### **Quality Competencies**

- 1. Uses best available evidence to continuously improve quality of clinical practice.
- 2. Evaluates the relationships among access, cost, quality, and safety and their influence on health care.
- 3. Evaluates how organizational structure, care processes, financing, marketing and policy decisions impact the quality of health care.
- 4. Applies skills in peer review to promote a culture of excellence.
- 5. Anticipates variations in practice and is proactive in implementing interventions to ensure quality.

#### **Practice Inquiry Competencies**

- 1. Provides leadership in the translation of new knowledge into practice.
- 2. Generates knowledge from clinical practice to improve practice and patient outcomes.
- 3. Applies clinical investigative skills to improve health outcomes.
- 4. Leads practice inquiry, individually or in partnership with others.
- 5. Disseminates evidence from inquiry to diverse audiences using multiple modalities.
- 6. Analyzes clinical guidelines for individualized application into practice

#### **Technology and Information Literacy Competencies**

- 1. Integrates appropriate technologies for knowledge management to improve health care.
- 2. Translates technical and scientific health information appropriate for various users' needs.
- 2a). Assesses the patient's and caregiver's educational needs to provide effective, personalized health care.
- 2b). Coaches the patient and caregiver for positive behavioral change.
- 3. Demonstrates information literacy skills in complex decision making.
- 4. Contributes to the design of clinical information systems that promote safe, quality and cost effective care.
- 5. Uses technology systems that capture data on variables for the evaluation of nursing care.

#### **Policy Competencies**

- 1. Demonstrates an understanding of the interdependence of policy and practice.
- 2. Advocates for ethical policies that promote access, equity, quality, and cost.
- 3. Analyzes ethical, legal, and social factors influencing policy development.
- 4. Contributes in the development of health policy.
- 5. Analyzes the implications of health policy across disciplines.
- 6. Evaluates the impact of globalization on health care policy development.
- 7. Advocates for policies for safe and healthy practice environments.

#### **Health Delivery System Competencies**

- 1. Applies knowledge of organizational practices and complex systems to improve health care delivery.
- 2. Effects health care change using broad based skills including negotiating, consensus-building, and partnering.
- 3. Minimizes risk to patients and providers at the individual and systems level.
- 4. Facilitates the development of health care systems that address the needs of culturally diverse populations, providers, and other stakeholders.
- 5. Evaluates the impact of health care delivery on patients, providers, other stakeholders, and the environment.
- 6. Analyzes organizational structure, functions and resources to improve the delivery of care.
- 7. Collaborates in planning for transitions across the continuum of care.

#### **Ethics Competencies**

- 1. Integrates ethical principles in decision making.
- 2. Evaluates the ethical consequences of decisions.
- 3. Applies ethically sound solutions to complex issues related to individuals, populations and systems of care.

#### **Independent Practice Competencies**

- 1. Functions as a licensed independent practitioner.
- 2. Demonstrates the highest level of accountability for professional practice.
- 3. Practices independently managing previously diagnosed and undiagnosed patients.
- 3.a Provides the full spectrum of health care services to include health promotion, disease prevention, health protection, anticipatory guidance, counseling, disease management, palliative, and end-of-life care.
- 3.b Uses advanced health assessment skills to differentiate between normal, variations of normal and abnormal findings.
- 3.c Employs screening and diagnostic strategies in the development of diagnoses.
- 3.d Prescribes medications within scope of practice.
- 3.e Manages the health/illness status of patients and families over time.
- 4. Provides patient-centered care recognizing cultural diversity and the patient or designee as a full partner in decision-making.
- 4.a Works to establish a relationship with the patient characterized by mutual respect, empathy, and collaboration.
- 4.b Creates a climate of patient- centered care to include confidentiality, privacy, comfort, emotional support, mutual trust, and respect.
- 4.c Incorporates the patient's cultural and spiritual preferences, values, and beliefs into health care. duplicate.
- 4.d Preserves the patient's control over decision making by negotiating a mutually acceptable plan of care.
- 4e. Develops strategies to prevent one's own personal biases from interfering with delivery of quality care.
- 4f. Addresses cultural, spiritual, and ethnic influences that potentially create conflict among individuals, families, staff and caregivers.
- 5. Educates professional and lay caregivers to provide culturally and spiritually sensitive, appropriate care
- 6. Collaborates with both professional and other caregivers to achieve optimal care outcomes.
- 7. Coordinates transitional care services in and across care settings.
- 8. Participates in the development, use, and evaluation of professional standards and evidence-based care.

#### **APPENDIX B**

### National Organization of Nurse Practitioner Faculties: Family Nurse Practitioner Role Competencies (2013/17)

Upon graduation or entry into practice, the family nurse practitioner should demonstrate competence in the categories described below:

Competency Area	NP Core Competencies	Family/Across the Lifespan NP Competencies
Independent Practice Competencies	1. Functions as a licensed independent practitioner. 2. Demonstrates the highest level of accountability for professional practice. 3. Practices independently managing previously diagnosed and undiagnosed patients. 3.a Provides the full spectrum of health care services to include health promotion, disease prevention, health protection, anticipatory guidance, counseling, disease management, palliative, and end-of-life care. 3.b Uses advanced health assessment skills to differentiate between normal, variations of normal and abnormal findings. 3.c Employs screening and diagnostic strategies in the development of diagnoses. 3.d Prescribes medications within scope of practice. 3.e Manages the health/illness status of patients and families over time. 4. Provides patient-centered care recognizing cultural diversity and the patient or designee as a full partner in decision-making. 4.a Works to establish a relationship with the patient characterized by mutual respect, empathy, and collaboration. 4.b Creates a climate of patient-centered care to include confidentiality, privacy, comfort, emotional support, mutual trust, and respect.	1. Obtains and accurately documents a relevant health history for patients of all ages and in all phases of the individual and family life cycle using collateral information, as needed.  2. Performs and accurately documents appropriate comprehensive or symptom- focused physical examinations on patients of all ages (including developmental and behavioral screening, physical exam and mental health evaluations).  3. Identifies health and psychosocial risk factors of patients of all ages and families in all stages of the family life cycle.  4. Identifies and plans interventions to promote health with families at risk.  5. Assesses the impact of an acute and/or chronic illness or common injuries on the family as a whole.  6. Distinguishes between normal and abnormal change across the lifespan.  7. Assesses decision-making ability and consults and refers, appropriately.  8. Synthesizes data from a variety of sources to make clinical decisions regarding appropriate management, consultation, or referral.  9. Plans diagnostic strategies and makes appropriate use of diagnostic tools for screening and prevention, with consideration of the costs, risks, and benefits to individuals.  10. Formulates comprehensive differential diagnoses.  11. Manages common acute and chronic physical and mental illnesses, including acute exacerbations and injuries across the lifespan to minimize the development of complications, and promote function and quality of living.
		12. Prescribes medications with knowledge of altered pharmacodynamics and

- 4.c Incorporates the patient's cultural and spiritual preferences, values, and beliefs into health care. duplicate.
- 4.d Preserves the patient's control over decision making by negotiating a mutually acceptable plan of care.
- 4e. Develops strategies to prevent one's own personal biases from interfering with delivery of quality care.
- 4f. Addresses cultural, spiritual, and ethnic influences that potentially create conflict among individuals, families, staff and caregivers.
- 5. Educates professional and lay caregivers to provide culturally and spiritually sensitive, appropriate care
- 6. Collaborates with both professional and other caregivers to achieve optimal care outcomes.
- 7. Coordinates transitional care services in and across care settings. 8. Participates in the development, use, and evaluation of professional standards and evidence-based care.

- pharmacokinetics with special populations, such as infants and children, pregnant and lactating women, and older adults.
- 13. Prescribes therapeutic devices.
- 14. Adapts interventions to meet the complex needs of individuals and families arising from aging, developmental/life transitions, comorbities, psychosocial, and financial issues.
- 15. Assesses and promotes self-care in patients with disabilities.
- 16. Plans and orders palliative care and end-oflife care, as appropriate.
- 17. Performs primary care procedures.
- 18. Uses knowledge of family theories and development stages to individualize care provided to individuals and families.
- 19. Facilitates family decision-making about health.
- 20. Analyzes the impact of aging and age-and disease-related changes in sensory/perceptual function, cognition, confidence with technology, and health literacy and numeracy on the ability and readiness to learn and tailor interventions accordingly.
- 21. Demonstrates knowledge of the similarities and differences in roles of various health professionals proving mental health services, e.g., psychotherapists, psychologist, psychiatric social worker, psychiatrist, and advanced practice psychiatric nurse.
- 22. Evaluates the impact of life transitions on the health/illness status of patients and the impact of health and illness on patients (individuals, families, and communities).
- 23. Applies principles of selfefficacy/ empowerment in promoting behavior change.
- 24. Develops patient-appropriate educational materials that address the language and cultural beliefs of the patient.
- 25. Monitors specialized care coordination to enhance effectiveness of outcomes for individuals and families.

#### **APPENDIX C: One-Minute Preceptor Model of Clinical Teaching**

#### **Step 1: Get a Commitment**

Get the student to commit to what they think is going on with the patient based on the history and physical examination findings. Ask: "What do you think is going on?" or "What do you want to do?"

Step 2: Probe for Supporting Evidence or underlying reasoning to explore the learner's understanding Ask WHY they have made their conclusion. "What led you to that conclusion?"

#### **Step 3: Teach General Rules Pertaining to the Case**

Use this case to teach general principles regarding similar patients. For example: All children should receive a full 10 days of antibiotics for a UTI, whereas a young, healthy, non-pregnant female can have a short course of antibiotics. "When this happens, do this."

#### Step 4: Reinforce What Was Done Well Using Descriptive not Evaluative Language

Positive feedback on what they did well, before what they missed. 'Specifically, you did an excellent job of...'

#### **Step 5: Give Guidance about Errors and Omissions**

You see the bigger picture and are the clinical expert. Help them widen their differential or correct their errors. "The next time this happens, try this."

Student Name:	Preceptor/Faculty	
	Name:	
Term / Year:	Clinical Site:	

#### Bold Line is the expected behavior for a student to pass at the end of the semester

I. Cli	nical Skills and Abilities				
Obta	ining Clinical Data:	Comments:			
1	Frequent gaps in history and physical exam data; frequent oversights or excesses in diagnostic				
1	testing and screening.				
2	Attempts to select appropriate test(s) based on history and physical exam obtained;				
	demonstrates basic knowledge of when and how to select diagnostic tests and screening.				
3	Consistently obtains a relevant health history, and preforms an appropriate comprehensive or				
	symptom-focused examination for patients of all ages; selects appropriate diagnostic tests.				
Clini	cal Judgment and Case Presentation:	Comments:			
1	Clinical data included but often disorganized; student not usually aware of potential differential diagnoses; inappropriate management plan.				
2	Usually presents organized clinical data, including basic potential differential diagnoses;				
	contains extraneous info as well; incomplete management plan.				
3	Presents client in a logical, organized fashion, containing comprehensive differential diagnoses				
	and appropriate management plan.				
	of Care to Optimize Health in previously diagnosed and undiagnosed patients.(disease	Comments:			
man	agement, health promotion, anticipatory guidance, counseling, follow up care)				
1	Decisions, counseling and recommendations occasionally inaccurate; not patient centered, and				
	rarely includes family, environmental, financial or cultural considerations in plan.				
Decisions, counseling and recommendations are generally accurate; usually patient-					
2	centered, and the plan of care includes one or more aspects of family, environmental, financial, or cultural issues.				
3	Decisions, counseling and recommendations are accurate, patient-centered, and holistically				
3	considers family/environmental/financial/cultural issues.				
Chai	ting (uses correct medical terminology, spelling is accurate):	Comments:			
1	Unorganized chart with missing data; unable to complete in timely manner.				
2	Complete information but disorganized format; student working on completing in a timely manner.				
3	Charts are generally complete, organized and concise; student working on completing in a timely manner.				
4	Charts are consistently complete, organized, and concise; completed in a time-efficient manner.				
Use	of evidence-based resources, including guidelines:	Comments:			
1	Demonstrates little evidence of researching evidence-based guidelines to develop plan care.				
	Demonstrates evidence of knowing evidence-based guidelines, but needs occasional				
2	prompting to incorporate guidelines in initial plan of care.				
3	Plans of care generally reflect use of evidence-based guidelines.				
	rall knowledge base:	Comments:			
	Limited knowledge of pathophysiology and/or psychosocial issues; demonstrates inadequate				
1	preparation and/or knowledge.				

2	Demonstrates relevant knowledge of basic pathophysiologic and psychosocial considerations; consistently seeks out additional information and answers to clinical						
4	questions as appropriate.						
	Consistently demonstrates extensive knowledge of advanced pathophysiologic and psychosocial						
3	principles.
