

What happens to the recorded video of my simulation?

During each simulation session, we use a platform called SimCapture to record and project the video for your peers in your clinical group to watch while you complete your sim. The recordings are saved to a password protected external hard drive that is filed away in a locked cabinet. Videos are kept for the duration of your nursing program. The Washington State Nursing Commission may require viewing of a video to view the School of Nursing simulation curriculum. If PLU SoN is asked to supply a video, the students in the video will be asked permission for viewing by the Commission Board, in accordance with the Confidentiality Form the student signs before each simulation. After you graduate, the videos from your cohort are deleted.
